

Bow tie in leather

The products you need:

- Leather remnants
- Snaps + snap fasteners
- Scissors
- Punch tong
- Flat nose plier
- Sewing machine
- Cardboard for template

<p>Step 1</p> <p>Cut out a template in a square the size, you want your bow tie to be. Place the template on top of the leather and cut. Remember to make room for seam allowance.</p>	
<p>Step 2</p> <p>Fold the leather and use your sewing machine to sew a seam. You don't need to sew the entire side – leave a bit of room unsewn to be able to turn the bow tie. After this, fold the seam allowance into the middle and sew both ends.</p>	
<p>Step 3</p> <p>Cut off the corners to make them look a bit pointier, when the right side of the leather faces outwards.</p>	
<p>Step 4</p> <p>Cut a strap of leather that will be tied around the bow tie.</p>	

<p>Step 5</p> <p>Sketch out a long straight strap for the neckpiece and cut it out.</p>	
<p>Step 6</p> <p>Fold the small leather piece that you made in step 4. Lay the leather on top of it (see picture for reference).</p>	
<p>Step 7</p> <p>Sew the small leather piece around the bow tie by using a needle and thread. If it's difficult to get the needle through the leather, use a flat nose plier to ease the process.</p>	
<p>Step 8</p> <p>Punch a hole for snaps with your rotary leather punch.</p>	

Step 9

Use the snap setter to install the snaps. Please note that the snaps have a top and a bottom.

**Step 10**

You can install more than one bottom part, which will make it possible to adjust the length of the bow tie.
