

## Phone sleeve in leather

### The products you need:

- Leather
- Cutting board
- Punch tongs
- Ruler
- Rotary knife
- Needle
- Thread
- Space maker
- Pencil

<p><b>Step 1</b></p> <p>Use your phone to sketch out the right size on the leather. After this, make a small incision to make it easier getting your phone out of the cover.</p>	
<p><b>Step 2</b></p> <p>Cut one of the sides following the outline with your rotary knife.</p>	
<p><b>Step 3</b></p> <p>Fold the leather and use the side, you just cut, as a template for the other side, so that they become identical. After outlining, cut the side.</p>	
<p><b>Step 4</b></p> <p>Use your space maker to mark, where the holes will be.</p>	
<p><b>Step 5</b></p> <p>Use the rotary punch to punch holes in the leather.</p>	

<p><b>Step 6</b></p> <p>Don't make any holes in the fold of the leather.</p>	
<p><b>Step 7</b></p> <p>Put needles in both ends of the thread.</p>	
<p><b>Step 8</b></p> <p>Start stitching from the bottom. Stick your needle through the bottom hole and make sure that the thread is of same length in each side.</p>	
<p><b>Step 9</b></p> <p>Stick the needles through the same hole to make the threads cross each other. Remember to tighten well.</p>	
<p><b>Step 10</b></p> <p>Tie a couple of knots on the inner side to finish off your stitch.</p>
